YORK.

ANNUAL REPORT  
OF THE COUNCIL  
OF THE  
YORKSHIRE  
PHILOSOPHICAL SOCIETY

FOR THE YEAR

1930

PRESENTED TO THE ANNUAL MEETING,

FEBRUARY 9th, 1931.

---

PRINTED BY ORDER OF THE COUNCIL.

1931.

[Issued March 31st, 1931.]

FORM  
OF A  
BEQUEST TO THE SOCIETY.

—O—

Every person desirous of bequeathing to the Society any sum of Money, Specimens, Books, Instruments, or other Property, is requested to make use of the following form:—

*I give and bequeath to the Trustees, for the time being, of the Society established at York, called "The Yorkshire Philosophical Society," for the use of the said Society, the sum of \_\_\_\_\_ to be paid out of such part of my personal estate as I may legally charge therewith. [Or here enumerate the effects or property intended to be bequeathed.] And I direct that the receipt of the Treasurer of the said Society, for the time being, shall be an effectual discharge to my Executors for the said legacy.*

*Hon. Secretaries :* A. W. Ping, M.A., K. G. Chilman.

REPORT OF THE COUNCIL  
OF THE  
YORKSHIRE PHILOSOPHICAL SOCIETY,  
9th FEBRUARY, 1931.

---

THE outstanding event of the past year has been the commencement of the work upon the repair and reconstruction of the Hospitium. Early in the year the Council decided to enlarge the upper room and also, on the recommendation of H.M. Office of Works, to partially reconstruct the roof, which in many parts had fallen into decay.

Your Council look forward to the completion of this work at an early date. The extra and unseen work have entailed a financial outlay very much in excess of the original estimate. In June last a further appeal for financial assistance was made to the members of the Society and the general public. The response, however, has been very disappointing. The Council would remind members that their donations, however small, may be spread over three, four or five years. It is sincerely to be hoped that before the Hospitium is reopened the deficit will be subscribed.

Various repairs have been carried out on the Museum Lodge and the Manor Lane Cottage.

The following is a full list of the Lectures delivered in the Tempest Anderson Hall during the past year:—

Thursday, January 9th.—“Ulster.” By Ernest Patton.

Thursday, January 23rd.—“The Illuminated Manuscripts in York Minster Library.” By The Rev. F. Harrison, M.A., F.S.A.

Thursday, February 6th.—“Mediæval Architects.” By Prof. A. Hamilton Thompson, M.A., D.Litt., F.S.A.

Thursday, February 20th.—“Roman Chester.” By Prof. R. Newstead, F.R.S.

Thursday, March 6th.—“The Story of the Incas of Peru.” By A. Stuart McNairn, F.R.G.S.

Thursday, October 16th.—“Malta, ever old and new.” By the Rev. F. Fitzpatrick.

Thursday, October 30th.—“Forests of Nigeria.” By R. St. Barbe Baker.

Thursday, November 13th. “Faces and Finger Prints.” By Dr. Ainsworth Mitchell, M.A., D.Sc.

Thursday, November 27th.—“Scenes of Indian Life.” By William Marriott.

Thursday, December 11th.—“Sea Hawks.” By Capt. C. W. R. Knight, M.C., F.Z.S.

The Annual Meeting of the Yorkshire Dialect Society was held in the Tempest Anderson Hall, on January 25th.

The Autumn Course of Lectures of the York University Extension Society was given in the Tempest Anderson Hall.

The number of new members elected during the year has fallen below the average. A leaflet setting forth the privileges of members may be obtained from the Keeper of the Museum, as also nomination forms and copies of the Laws.

The number of visitors to the Gardens, Ruins and Museums has been less than usual, in part due to the unfavourable weather prevailing through July, August, and September, and also to the closing of the Hospitium.

The Society has during the last year lost two Honorary Members, viz., Professor A. P. Pavlow, who was elected in 1889, and C. J. Leyland, elected in 1891.

By a unanimous vote of the Council Prof. G. Baldwin Brown, M.A., LL.D., F.S.A., Watson Gordon Professor of Fine Art, The University, Edinburgh, and R. Mortimer Wheeler, M.C., D.Litt., M.A., F.S.A., Keeper and Secretary of the London Museum, Lancaster House, London, S.W., have been elected Honorary Members of the Society.

FIELD NATURALISTS' SECTION. The Field Naturalists' Section has continued its work with unabated vigour during the year, although the weather conditions in the summer months rather marred several of the Excursions. It was very pleasing, however, to have a joint Excursion with neighbouring Societies, and the Excursion with the Darlington and Teesdale Natural History Society and the Leeds Field Club, to Askham Bogs was a great success, upwards of 30 naturalists being present.

A distinctly helpful addition to the usefulness of the Section has been the gift of the late Mr. John Mennell's Moss Herbarium, by his widow. It is intended that this Herbarium shall be available for reference by members of the Section. A complete list of books in the library has been printed by the kindness of the parent Society, and copies circulated. Membership stands at 117, a net increase of 11.

The Lectures and Excursions during 1930 have been as follows:—

January 15th.—Lantern Lecture: "More Family Affairs in Birdland." F. Vear.

January 29th.—Botanical Recorder's Report. J. H. Evers. Lantern Lecture: "Trees in the Museum Gardens." H. J. Wilkinson.

February 12th.—Two Lecturettes. H. Sowden and W. G. Bramley.

February 26th.—Entomological Recorder's Report. A. Smith. Paper: "Melanism in Geometer Moths." A. J. A. Woodcock, M.Sc.

March 12th.—Lantern Lecture: "Birds of the Yorkshire Hills and Dales." F. Jefferson.

March 26th.—Recorder's Reports. Vertebrate Zoology, S. H. Smith, F.Z.S. Ornithology, V. G. F. Zimmermann.

April 2nd.—Annual Meeting.

June 7th.—Excursion to Allerthorpe Common.

June 18th.—The City Walls.

June 28th.—Excursion to Millington Springs.

July 9th.—An evening at Poppleton.

July 16th.—Excursion to Sandburn.

July 23rd.—Excursion to Castle Howard.

August 23rd.—Excursion to Askham Bogs.

(Jointly with the Darlington Society and the Leeds Field Club).

September 20th.—Fungus Foray at Stillington Common.

October 1st.—Presidential Address: "The Value of Entomological Studies." A. J. A. Woodcock, M.Sc., F.E.S.

October 15th.—General Exhibit Night.

October 29th.—Lantern Lecture: "Life in the Sea." Prof. W. Garstang, M.A., D.Sc.

November 12th.—Geological Recorder's Report. J. A. Dell, M.Sc. Paper: "Meteorites." S. Melmore, B.Sc., F.G.S.

November 26th.—Lantern Lecture and Exhibits. "Denizens of Fresh Water." C. Allen.

December 10th.—Conchological Recorder's Report. Paper: "*Helix aspersa*." H. Sowden.

December 17th.—Exhibit Night.

## NEW MEMBERS, ELECTED IN 1930.

- Appleton, C. H., 7, Clayton Street.  
 Bakes, Miss M. M., 7, Marygate.  
 Benson, Rev. R. W., M.A., St. Barnabas Vicarage.

# THE YORKSHIRE MUSEUM.

## REPORT FOR THE YEAR 1930.

**D**URING the past year considerable time has been devoted to examining the Collections which for lack of space it is impossible to exhibit. Some have been cleaned, many re-labelled, and all are in good condition

The specimens loaned to the Victoria and Albert Museum, South Kensington, for the Exhibition of English Mediæval Art, from May 14th to September 14th, have been returned and placed in their respective collections. As a result of this exhibition many foreign visitors have paid a visit to the Museum to see the remainder of the various collections.

The Yorkshire Architectural and York Archæological Society continues to hold its meetings and house its Library in the Museum.

**EDUCATIONAL WORK.**—During February and March, the Rev. Angelo Raine, B.A., gave a course of six lectures on “The History of York from the coming of the Romans to the Norman Conquest.” The interest was well sustained throughout the course which was well attended.

The City Educational Authorities continue to make use of the Museum Collections. During the year 160 children attended the Museum for study and instruction, and 68 students from the City School of Arts and Crafts.

The Keeper has given numerous short addresses on the different Collections, to various parties of visitors, and to artizans and children on Saturday afternoons.

Amongst the various organizations that have visited the Museum during the past year were:—

March 19th.—The Association of Assistant Librarians (Yorkshire Division).

April 26th.—Sorby Scientific Society, Sheffield.

April 30th.—The Brethren of the Scarborough Masonic Lodges.

May 31st.—Hull Municipal Training College.

May 31st.—Barnsley Grammar School.

June 2nd.—Dutch Journalists.

June 4th.—The Wheelright Grammar School, Dewsbury.

June 11th.—Delegates of the Co-operative Congress.

June 17th.—Heywood Grammar School.

June 21st.—Members of the Yorkshire Photographic Union.

June 26th.—National Association of Master Bakers.

June 28th.—Bradford Foremen's Mutual Benefit Society.

June 28th.—Members of the Order of the Sons of Temperance.

July 9th.—Manchester and District Retail Confectioners' Association.

October 17th.—Harrogate Rotary Club.

October 25th.—British Empire Naturalists' Society.

The Collections or specimens have been studied by J. C. Fenton, Cleckheaton; Prof. Henry Woods, M.A., F.R.S., the Sedgwick Museum, Cambridge; Miss Alice Edleston, Gainford; J. E. Miles, South Shields; E. G. Birley, B.A., Manchester; C. Bryner Jones, Aberystwyth; Dr. W. T. Arkell, M.A., the University Museum, Oxford; W. E. Swinton, B.Sc., the British Museum (Nat. Hist.), London; and Vernon Wilson, Leeds University.

**SPECIAL EXHIBITS.**—Apart from recent donations, special exhibits have been made of a set of photographs of Vesuvius in eruption, and of Flint and Stone Implements found in York.

Turning to the different departments of the Museum:—

**ETHNOLOGY.**—This gallery continues to attract large numbers of visitors, both from an educational and scientific standpoint. A number of minor alterations have been carried out which have made it possible to exhibit further specimens, the most important amongst these are the beautiful series of thirty-nine Anglo-Saxon Cinerary Urns (5th and 6th century)

from the Saxon Cemetery at Heworth, York, which were reassembled by the late Dr. J. H. Gibson; a series of Toasting Stands, and other by-gones.

The Chas. Monkman collection of flint and stone implements has been cleaned and rearranged.

GEOLOGY.—Owing to the repairs to the Hospitium and the transfer of part of its contents to one of the geological galleries, no work has been possible on the Collection of Yorkshire Fossils. The Tertiary Plants in the Reed Collection have, however, been cleaned and remounted. The type specimen of *Ichthyosaurus crassimanus*, Blake (Owen MS.) has been studied in some detail and the results published elsewhere (see page 45).

BOTANY.—The specimens of British Flowering Plants and Ferns in the Herbarium are in fair condition. The foreign specimens require attention and more room.

ASTRONOMY.—During the year a large number of observations have been made. All the instruments have been thoroughly overhauled and cleaned, and are in good order.

NUMISMATICS.—The rearrangement of the collections is now approaching the end of the first stage, and the only coins which have not received a preliminary classification and labelling are the Greek, the Oriental, and the Romans after Commodus, also the Medal collection.

The increased accommodation which has been provided during the year by careful alterations to the existing cabinets is proving most useful in facilitating comparative study of the types. The Northumbrian Stycas have now been examined and sorted out. They are a good and fairly complete series of special interest to this Society, as the Styca is exclusively a Northumbrian coin which circulated in this district, and there have been important finds at York and Bolton Percy. Some further detailed work is still needed on this group, as many are difficult to decipher until compared with other collections. The Society has received various welcome gifts throughout

the year, and there have been a few finds in local excavations or building operations. In October last, about thirty Roman denarii were found in excavating for the new Post Office Parcels Office, between Scarborough Bridge and York Station. Mr. Philip Corder examined thirteen of these which consisted of 2 Domitian, 5 Trajan, 2 Hadrian, 2 Antonius Pius, 1 Faustina I, and 1 Faustina II. Two denarii of Trajan and one of Hadrian Mr. Corder very kindly presented to the Museum. It is, however, matter for great regret that the Society by no means always has the opportunity to inspect and record, and possibly to buy, any objects which may be found. It is highly desirable that any finds should be promptly mentioned to the Keeper, so that they may be adequately inspected *in situ* before being dispersed. Only too often it has happened that coins and other objects have been found and sold privately by the finders, although the Society, if informed in time, would have been glad to inspect and report, or possibly in some cases to buy, and at any rate to make proper scientific use of the facts. The Society's interest is of course specially concentrated on Roman and other coins which have a connection with York or Yorkshire or Northern England, and it is hoped that the tradition may be strengthened that the Society is the natural place to which such objects or finds should be reported or offered in the first place.

CERAMICS.—The specimens in the Ceramic Collections have been maintained in an efficient state during the past year. Many have been cleaned and the labelling of the specimens is progressing. During the year a new case has been provided down the left-hand side of the Central Hall, which has enabled the specimens to be better displayed and seen, as the old cases obstructed too much light, with the result of an increase of interest by our visitors. A good many specimens have been added during the year, the most important being a Rockingham biscuit bust of Earl Fitzwilliam to whose assistance and patronage the factory largely owed its success. This bust has not previously been mentioned in connection with the Rockingham Works, and is probably a duplicate of one made for the Fitzwilliam family, and not for sale, as are other of the

factory's productions. Several rather rare marks on pieces of Yorkshire pottery have also been added to the Collection.

THE LIBRARY.—Many of the Members of the Society seem unaware of the extent and value of the Library, which includes the Reed Bequest (Geological and Natural History works for reference only), the Wooler Bequest, and those volumes obtained by purchase and exchange. The total number of volumes to date is 8,650. Of these 541 are in the Reed Reference Library, and 1,600 in the Wooler Bequest. The whole of the volumes are card catalogued under the following subjects:—

<i>Subject.</i>	<i>No. of Vols.</i>	<i>Subject.</i>	<i>No. of Vols.</i>
Agriculture .. .. .	51	History .. .. .	435
Anthropology and Ethnology	88	Meteorology .. .. .	9

Geology .. .. .	1160	antiquarian & archæological)	1600

In addition to the above there are a large series of unbound volumes of various serial publications, and Transactions and Proceedings of numerous Societies.

Members are reminded that the Library is open from 10 a.m. to 4 p.m., and that they are entitled to borrow three volumes at a time. All books must be returned within a month, but may be renewed for the same period, if not required by another member.

During the year 65 volumes have been added by purchase, and 55 by presentation, in addition to the usual unbound memoirs.

The number of volumes borrowed was 207.

METEOROLOGY.—Statistics of Station: Longitude,  $1^{\circ} 5' W.$ ; Latitude,  $55^{\circ} 57' N.$ ; height above mean sea level, 56 feet.

The *rainfall* for 1930 was above normal, being 29.24 inches, 4.24 inches above the average for over 50 years. The rain was fairly spread over the year, with the exception of January, July, August and November, when the totals for the months were 3.31, 5.02, 3.28 and 3.14 inches respectively. February, May and October, were the driest months with 0.41, 1.05 and 1.62 inches respectively.

*Temperature* ranged from  $89^{\circ} F.$  on August 28th, to  $22^{\circ} F.$  on March 20th and December 10th: the range of temperature for 1930 being thus  $55.1^{\circ} F.$  as against  $55.4^{\circ} F.$  for 1929. A mean pressure of 1012.1 millibars (1000 millibar = 29.531 inches of mercury) at M.S.L., (corrected for diurnal variations), has been recorded, as against 1015.5 millibars for 1929. January gave the lowest mean for the year, 1003.7 millibars, October next with 1008.2 millibars. February was highest 1023.1 millibars, and June next with 1016.3 millibars. The extreme range was 2.01 inches as compared with 1.60 inches in 1929. The highest reading of the barometer was taken February 9th, at 9 a.m., viz.: 30.79 inches, and the lowest on January 12th, at 9 p.m., viz.: 28.78 inches.

*Snow or Rain* fell to the amount 29.24 inches or 742.7 mm., as against 22.82 inches or 579.3 mm., for 1929, an increase of 6.42 inches or 163.4 mm., for the year. The heaviest fall of the year occurred on July 22nd, when 30.0 mm. (1.18 inches) fell. The cumulative totals for the years since 1820 are, for the heaviest monthly falls, August 6000.35 mms., October 5753.48 mms., and July 5432.30 mms.

*Observations of Winds* show that during 1930 we had "strong" winds on 7 days (force 4 to 7 on scale 0-12), 2 days more than 1929, and "calm" on 9 days as compared with 8 in 1929. The chief winds have been observed as S. (118), W. (42), N. (75), S.E. (22), S.W. (28), and N.W. (25).

Thunder was heard on 15 days, snow or sleet fell on 13 days, as against 18 days in 1929; and there were hailstorms on 2 days, as against 3 days the previous year.

*Bright Sunshine* was recorded 1214'1 hours as against 1294'0 hours in 1929, a decrease of 79'9 hours for the year.

The daily mean was 3'31 hours, and the percentage of possible sunshine 27 as against 29 in 1929.

After the cold and dry February, spring growths were rather late, and vegetation did not make much progress. The hay crops were fairly good and were gathered in excellent condition. Cereals in this district were on the whole very good, but the wet weather at the end of August and September spoiled the harvest. Potatoes were a fair crop, and were gathered well.

It is urgently requested that any discovery of Archæological interest in the neighbourhood may be brought to the notice of the Keeper of the Museum, or the Honorary Curators, as early as possible.

The Keeper of the Museum will be pleased to give any information in his power, and may be seen daily, Museum engagements permitting.

A REPTILIAN EGG FROM THE LIAS OF WHITBY.

BY SIDNEY MELMORE, B.Sc., F.G.S.

The specimen here described was originally in the collection of Edward Wood, of Richmond, and is now in the Yorkshire Museum. It was originally labelled "*Coprolite of Ichthyosaurus, Lias, Whitby.*"

The natural surface of the specimen is smooth and egg-shaped (heteropolar), without the potato-like aspect with concavities or "eyes" seen on the surface of many coprolites. It has also one flat artificially polished surface (Pl. I, Fig. 1) 8.0 cm. in length (CD), and 5.9 cm. in diameter (AB). It is 1.7 cm. thick (EF). \*

The polished surface shows an outer band of pyrite 0.5 cm. thick. This band is fairly compact at its inner edge and diffuse near the surface of the specimen. This is followed by a band of slate-blue mudstone 0.4 to 0.5 cm. thick. The innermost part of the specimen at the less rounded end is made up of strings and irregular patches of chocolate-brown marl. This penetrates the mudstone and pyrite layers and comes to the surface. In the more rounded end this gives place to an involved mass of a dull white substance. On the assumption that the specimen was a coprolite it was expected this would prove to be calcium phosphate. Examination however proved it to be compact scaly calcite. A minute

\* Thin sections have since been cut from the specimen and it has been repolished.

fragment was picked out and examined under the microscope. It had the refractive index of calcite and was soluble with effervescence in HCl. The mudstone and brown marl also effervesced with acid.

Given the dimensions AB, EF, we can calculate the original diameter GH, and arrive at the value 6.7 cm. Knowing the length of the polished surface CD, and taking the original length JK proportional to the original diameter, we find JK equal to 9.2 cm.

On account of its shape and internal structure the specimen can hardly be regarded as a coprolite. Nor does it appear to be of purely physical origin, since the pyrite cannot be explained as a Liesegang ring since it does not follow the contour of the nucleus but is penetrated by it as already described.

A transverse section (Pl. 1, Fig. 2) and two tangential sections through the outer edge of the pyrite have been cut from the specimen. These show that it becomes thoroughly compact at a distance of about 0.7 mm. from the inner edge and is devoid of any organic structure. The mudstone on both sides of the pyrite contains a few foraminifera.

V. van Straelen has shown\* that among the eggs of fossil reptiles there are those with shells whose mamillary and prismatic zones and canals can be clearly recognised under the microscope: and those contained in a parchment-like covering without microstructure.

\* V. van Straelen. *Les Oeufs de Reptiles fossiles*. *Palæobiologica*, 1 Band (1928), p. 297.

This specimen evidently belongs to the latter type, the pyrite having been deposited by double decomposition across the membrane in the manner well known to mineral synthesists. The sulphuretted hydrogen from the egg may perhaps have initiated the deposition which took place sufficiently soon to harden the membrane and prevent it collapsing.

It is not without significance that some of the oldest reptilian eggs hitherto known (from the Bathonian of Stonesfield)\* are heteropolar and have parchment-like shells. Assuming the original parchment covering to have been situated where the pyrite is most compact, the length of the complete egg must have been 8.5 cm. and the greatest width 6.0 cm.

H. G. Seeley has shown that some species of *Ichthyosaurus* and *Plesiosaurus* were viviparous.†

If then this specimen is indeed a reptilian egg it may perhaps be referred to Crocodilia, and in point of size it agrees with eggs of existing crocodiles.

In conclusion I desire to express my thanks to Sir Arthur Smith Woodward, LL.D., F.R.S., for much valued help and encouragement in the course of this work.
